

I eat meat two or three times weekly (T5)

Meat is part of almost every meal locally (T0)

My preference for protein is fish or I include meat to complete meals (T0)

People around me prefer meat with every meal (T-1)

I am happy with vegetarian meals (T7)

A graph with five nodes: T0, T3, T5, T-1, and T7. T0 is a light blue node with an orange dot on top. T3 is an orange node. T5 is a green node. T-1 is a blue node. T7 is a red node. Edges connect T0 to T3 (purple), T0 to T5 (purple), T0 to T-1 (purple), and T0 to T7 (thick green).

The diagram illustrates the relationships between five nodes representing different attitudes and beliefs about meat consumption. The nodes are:

- I prefer fish over meat (T2)** (orange node)
- I think about my meat consumption (T1)** (blue node)
- Recent studies say red meat is healthy (T4)** (green node)
- I do not eat meat every day (T5)** (green node)
- I enjoy non-meat meals like salad (T0)** (blue node)

The edges connecting the nodes are:

- A thick orange line connects **I prefer fish over meat (T2)** and **I enjoy non-meat meals like salad (T0)**.
- A thick purple line connects **I think about my meat consumption (T1)** and **I do not eat meat every day (T5)**.
- A thin purple line connects **I think about my meat consumption (T1)** and **Recent studies say red meat is healthy (T4)**.
- A thin green line connects **Recent studies say red meat is healthy (T4)** and **I do not eat meat every day (T5)**.
- A thin blue line connects **I enjoy non-meat meals like salad (T0)** and **I do not eat meat every day (T5)**.

A graph with five nodes: T-1 (blue), T0 (light blue), T2 (orange), T4 (green), and T5 (green). The edges are: T-1 to T0 (blue), T-1 to T4 (blue), T4 to T0 (orange), and T4 to T5 (blue).
